Listing of Claims:

1. (Currently Amended) A method of analyzing the spatial distribution of at least one chemical substance retained by a biological matter, ~~characterized by the steps of the~~ method comprising
 - (a) supplying a sample of said biological matter as a specimen surface;
 - (b) producing at least one imprint of said specimen surface on at least one corresponding separate substrate surface, said at least one chemical substance being transferred to the ~~same~~separate substrate surface with retained lateral distribution thereon;
 - (c) subjecting said at least one imprint to imaging mass spectrometry, at least one signal from at least two points being produced, the magnitude of said at least one signal being dependent on the amount of said at least one chemical substance laterally present on said substrate surface;
 - (d) recording said at least one signal from said at least two points; and
 - (e) determining said spatial distribution of said at least one chemical substance from said at least one image of said at least one imprint.
2. (Currently Amended) The method as in claim 1, wherein said at least one chemical substance ~~mainly~~ comprises organic material.
3. (Original) The method as in claim 2, wherein said organic material comprises a lipid, an amino acid, a peptide, a protein, a carbohydrate, a nucleotide, a transmitter substance, a drug, or a targeting molecule.
- 4.-8. (Cancelled).
9. (Previously Presented) The method as in claim 1, wherein said biological matter comprises cells, tissue, virus, body liquid, or biological molecules.
10. (Previously Presented) The method as in claim 1, wherein said sample of said biological matter is supplied as a specimen surface *in situ*.

11. (Previously Presented) The method as in claim 1, wherein said sample of said biological matter is supplied as a specimen surface by applying it on a solid surface.
12. (Original) The method as in claim 11, wherein said solid surface is a glass surface.
13. (Previously Presented) The method as in claim 1, wherein multiple sequential imprints are produced from the same area of said specimen surface.
14. (Previously Presented) The method as in claim 1, wherein said biological matter is fractured or cut in order to expose its interior before producing said at least one imprint.
15. (Previously Presented) The method as in claim 1, wherein said specimen surface is pretreated immediately before producing said at least one imprint.
16. (Original) The method as in claim 15, wherein said specimen surface is pretreated by condensing a liquid of a non-polar solvent and/or a polar solvent onto the same.
17. (Original) The method as in claim 16, wherein said polar solvent is a water solution.
18. (Previously Presented) The method as in claim 16, wherein said specimen surface is first brought to room temperature or cooled and is then arranged above a heated container containing said liquid.
19. (Previously Presented) The method as in claim 1, wherein said at least one imprint is produced within 100 s after said pretreatment of said specimen surface.
20. (Previously Presented) The method as in claim 1, wherein said specimen and/or said substrate is flexible.
21. (Previously Presented) The method as in claim 1, wherein said substrate surface is a metal surface.
22. (Currently Amended) The method as in claim 21, wherein said metal is silver, gold, palladium, platinum, nickel, chromium, or copper, ~~preferably silver~~.

23. (Previously Presented) The method as in claim 1, wherein said substrate surface is structured.
24. (Original) The method as in claim 23, wherein said substrate surface is structured with protrusions of 0.01-5 μm .
25. (Previously Presented) The method as in claim 1, wherein said substrate surface is polished.
26. (Previously Presented) The method as in claim 1, wherein said substrate surface is cleaned immediately before producing said at least one imprint.
27. (Original) The method as in claim 26, wherein said substrate surface is cleaned by means of chemical etching, plasma cleaning, or UV/ozone treatment, or a combination thereof.
28. (Previously Presented) The method as in claim 1, wherein said specimen surface is subjected to lyophilization, freeze-substitution, or air drying before producing said at least one imprint.
29. (Previously Presented) The method as in claim 1, wherein said biological matter is subjected to a salt solution before and/or after supplying said sample of biological matter as a specimen surface.
30. (Currently Amended) The method as is claim 29, wherein said salt is a sodium salt, a potassium salt, a copper salt or a silver salt, ~~preferably a silver salt~~.
31. (Previously Presented) The method as in claim 1, wherein said at least one imprint is produced by pressing said specimen surface against said substrate surface.
32. (Original) The method as in claim 31, wherein said pressing is accomplished by means of a compressible material.
33. (Previously Presented) The method as in claim 31, wherein said pressing is accomplished by applying a force between 0.01 and 10 MPa.

34. (Currently Amended) The method as in claim 31, wherein said pressing is performed for up to 100 s.
35. (Previously Presented) The method as in claim 31, wherein said pressing is performed so that said at least one imprint represents below 5 monolayers, preferably below 2 monolayers, comprising said at least one chemical substance on said substrate surface.
36. (Previously Presented) The method as in claim 21, wherein a metal layer is deposited onto said substrate surface before producing said at least one imprint.
37. (Previously Presented) The method as in claim 1, wherein a metal layer is deposited onto said substrate surface after producing said at least one imprint.
38. (Original) The method as in claim 37, wherein said layer of metal has a thickness of less than 100 nm.
39. (Previously Presented) The method as in claim 36, wherein said layer of metal is a silver layer.
40. (Previously Presented) The method as in claim 1, wherein said imaging mass spectrometry is a Secondary Ion Mass Spectrometry.
41. (Currently Amended) The method as in claim 40, wherein said Secondary Ion Mass Spectrometry is Time of Flight - Secondary Ion Mass ~~Spectrometry~~ Spectrometry.
42. (Previously Presented) The method as in claim 40, wherein a focused beam of ions is produced by the primary ion source in said Secondary Ion Mass Spectrometry.
43. (Original) The method as in claim 42, wherein said ions are C₆₀, Ga, In, or Au ions.
44. (Original) The method as in claim 43, wherein said Au ions are clusters of n ions, $n \leq 10$.
45. (Original) The method as in claim 42, wherein said focused beam has a diameter below 10 μm , preferably below 1 μm .

46. (Currently Amended) The method as in claim 1, wherein a light sensitive matrix is applied onto said substrate surface ~~before~~when producing said at least one imprint.
47. (Previously Presented) The method as in claim 1, wherein a light sensitive matrix is applied onto said substrate surface after producing said at least one imprint.
48. (Previously Presented) The method as in claim 1, wherein a light sensitive matrix is applied onto said specimen surface before producing said at least one imprint, a portion of said light sensitive matrix being transferred to the substrate surface when said at least one imprint is produced.
49. (Previously Presented) The method as in claim 1, wherein said imaging mass spectrometry is a Matrix Assisted Laser Desorption Ionisation.
50. (Currently Amended) The method as in claim 49, wherein the light source of said Matrix Assisted Laser Desorption Ionization comprises a focused laser beam, ~~preferably an ultraviolet laser beam.~~
51. (Previously Presented) The method as in claim 1, wherein said at least one signal is recorded from an array of points on said substrate surface.
52. (Previously Presented) The method as in claim 1, wherein said at least one image is produced from said at least one signal, the colour or the brightness in each point of said at least one image being dependent on the magnitude of said at least one signal from the corresponding point on said substrate surface.
53. (New) The method as in claim 50, wherein said focused laser beam is an ultraviolet laser beam.
54. (New) The method as in claim 22, wherein said metal is silver.
55. (New) The method as in claim 30, wherein said salt is a silver salt.
